

# Gebrauchsanweisung

pUC19 DNA

Hochreine Plasmid DNA von pUC19 (pUC19c, Acc. No.: L09137) mit einer Gesamtlänge von 2686 Basenpaaren.

- oc-Form
  - ccc-Form

## 1,2 % Agarosegel

**OD260/280:** >1,70  
**genom. DNA:** <2 %  
**oc-Form:** <3 %  
**ccc-Form:** >95 %  
**Basenpaare:** 2686

## Ausstattung (Genname)

Lac-Operon (*lacZ* α): *lacZ* / 682-23

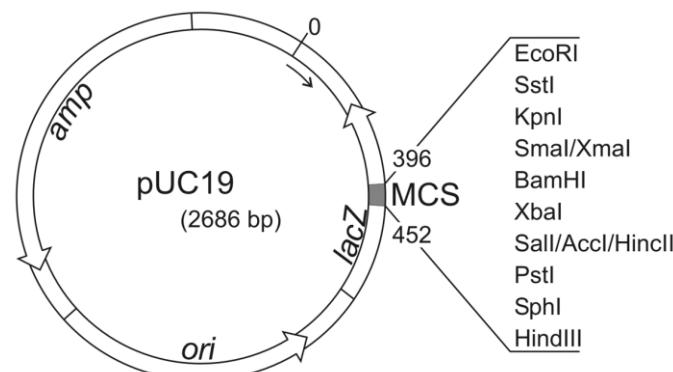

Ampicillinresistenz (*bla*): amp / 2417-1629

Replikationsursprung (*ori*). *ori* / 1455-870

Die Koordinaten sind in der Plasmidkarte im Uhrzeigersinn notiert.

## Beschreibung

**pUC19** ist ein gängiger high-copy Klonierungsvektor für *E. coli* Rekombinanten. Die Lage der Multi Cloning Site (MCS), die im Leseraster in das LacZ-Gen inseriert ist, ermöglicht eine Blau-Weiß-Selektion von Insert-haltiger Plasmid-DNA durch  $\alpha$ -Komplementierung. Die Kopienzahl des Plasmids pro Zelle ist abhängig von der Temperatur und beträgt ca. 70-80 bei 37 °C und über 200 bei 42 °C. Die Gesamtsequenz kann unter der Accession Number (L09137) aus der EMBL-Datenbank ([ebi.ac.uk/embl/](http://ebi.ac.uk/embl/)) erhalten werden.

### **Multi-Cloning-Site:**

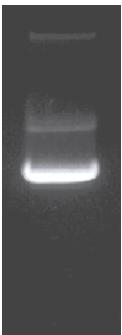

→ Lac Z

# Instructions for use

## pUC19 DNA

**High-purity plasmid DNA from pUC19 (pUC19c, Acc. No.: L09137) with a total length of 2686 base pairs.**

- oc-Form
  - ccc-Form
- 1,2 % Agarosegel

OD260/280:	>1,70
genomic DNA:	<2 %
oc-form:	<3 %
ccc-form:	>95 %
base pairs:	2686

### Design: (gene name)

Lac-Operon 682-237:(*lacZα*) :*lacZ*

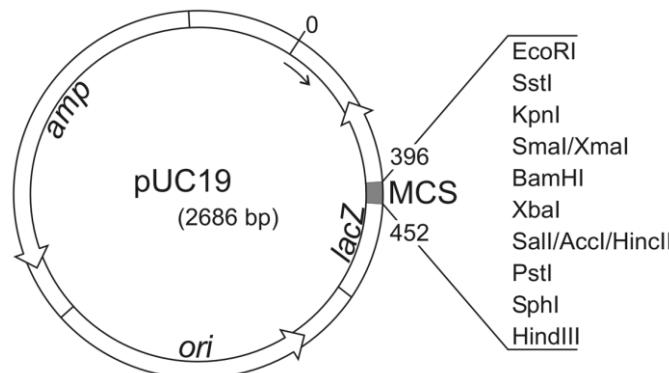

Ampicillin resistance (*bla*): *amp* / 2417-1629

Origin of replication (*ori*): *ori* / 1455-870

The coordinates are listed clockwise in the plasmid map.

### Description

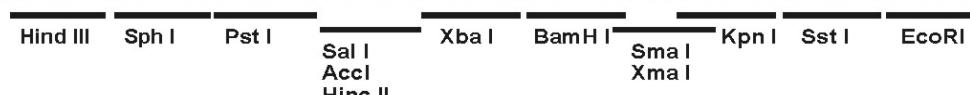

pUC19 is a standard high-copy cloning vector for *E.coli* recombinants. The position of the Multi Cloning Site (MCS), which is inserted in frame into the *LacZ*-gene, enables a blue-white selection of insert containing plasmid DNA by α-complementation. The copy number of plasmids per cell depends on the temperature and equals app. 70-80 at 37 °C and over 200 at 42 °C. The total sequence can be obtained from the EMBL data bank (ebi.ac.uk/embl/) under accession number (L09137).

### Multi-Cloning-Site:

The **pUC19 plasmid-DNA** was produced in host bacteria low in nuclease, and isolated through ion-exchange chromatography. It is available at an extremely high percentage in "supercoiled" form (ccc-form >95 %) and being a high-purity DNA, (OD<sub>260/280</sub> >1.70) it is ideal for different applications:

- controlling transformation efficiency
- comparison with plasmid-ccc-forms of unknown size
- cloning DNA-fragments
- restriction (production of DNA-linear markers)
- calibrating DNA-precipitating or DNA-preparing procedures or equipment
- blocking of DNA-chips with plasmid-DNA of a defined sequence.

DNA is delivered lyophilised.

**pUC19-Plasmid-DNA** 50 µg X911.1
